

Salehs Solicitors

Salehs Solicitors

UPGRADE FROM ANALOGUE
TO DIGITAL TO ACHIEVE
GREATER EFFICIENCIES

Salehs are a growing law firm based in Manchester, offering legal support for businesses and consumers alike. The firm has recently grown through the successful acquisition of Solis Law and the sustained growth of other departments, notably Commercial Property and Commercial Finance. Salehs also specialise in Real Estate and Residential Property with a combined team of 27 fee earners and 15 staff in the admin support team.

THE CHALLENGE

Salehs were using an outdated analogue system to dictate and transcribe their legal documents. The disadvantages of using analogue tapes and long transcription were being felt across the firm and were causing many issues for both the fee earners and the admin support team.

The fee earners had to physically hand over tapes to be transcribed to the office adding long delays to the documentation process and making remote working very difficult.

On the transcription side, the admin team found transcriptions difficult due to the rewinding and forwarding of the tapes for error rectification as well as the tapes often being wiped before errors were spotted. Scheduling for transcribers across the team was challenging as the team couldn't tell at a glance how long the tapes were as there was no way of knowing how long a transcription would take without listening to it.

Staff availability remained the number one issue for the firm as when transcribers were off productivity significantly reduced. Salehs knew that converting to digital would allow the firm to overcome all the issues they were experiencing and have the new ability to outsource transcription work when in-house admin resource was limited.

OBJECTIVE

- Upgrade from analogue to digital dictation.

SOLUTION

- SpeechWrite Enterprise

THE BENEFITS

- Increased productivity
- Reduction of in-house staff
- Easy file generation
- Increased profitability
- Ability to outsource work
- Remote working
