

SpeechWrite Digital

Instant Voice to Text renowned speech processing from Dragon®

Maximise surgery productivity with voice recognition applications

Dragon® Medical is the leading speech recognition solution in healthcare today used by over 10,000 healthcare sites and half a million doctors worldwide.

The voice-to-text application allows healthcare professionals to dictate their consultation, report or referral and then immediately process the recording into a typed, formatted and polished document without the need for additional transcription resources. This software also allows doctors to dictate anywhere within their EHR system - allowing quick locating and retrieval of patient files, quicker document output times and ultimately a better provision of patient care.

Increased accuracy with voice recognition means fewer errors to correct, allowing GP's to spend more time with patients, improving both quality of care and patient satisfaction. It also ensures practice efficiency is maximised by allowing surgeries to reduce transcription and, as a result, allocate internal clerical resources to more patient-facing tasks.

Dragon® medical boasts a 99% accurate recognition rate and includes a complete range of medical vocabularies allowing users to specialise in their field.

“Dragon® medical boasts a **99% accurate** recognition rate

Benefits – at a glance:

- ✓ Lets you **dictate faster** and more accurately than ever before
- ✓ Saves clinicians **30 minutes** or more a day
- ✓ Allows you to spend **more time with patients**
- ✓ Allows clinicians to dictate in their **own words**
- ✓ Enables **faster document turnaround** time
